Attempt : 1

Total Mark : 10

Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

In a user registration system, there is a requirement to implement a username validation module. Users attempting to register must adhere to specific criteria for their usernames to be considered valid.

Your task is to develop a program that takes user input for a desired username and validates it according to the following rules:

The username must not contain any spaces. The username must be at least 5 characters long.

Implement a custom exception, InvalidUsernameException, to handle cases where the entered username does not meet the specified criteria.

Input Format

The input consists of a string S, representing the desired username.

Output Format

If the username is valid, print "Username is valid: [S]" .

If the username is invalid:

1. If the username is short, print "Invalid Username: Username must be at least 5 characters long"
2. If the username contains spaces, print "Invalid Username: Username cannot contain spaces"

Refer to the sample output for formatting specifications.

Sample Test Case

Input: John

Output: Invalid Username: Username must be at least 5 characters long

Answer

```
import java.util.*;  
class InvalidUsernameException extends Exception{  
    public InvalidUsernameException(String s){  
        super(s);  
    }  
}  
class Main{  
    public static void name(String s) throws InvalidUsernameException{  
        int l=s.length();  
        if(l<5){  
            throw new InvalidUsernameException("Username must be at least 5  
characters long");  
        }  
        else{  
            for(int i=0;i<l;i++){  
                if(s.charAt(i)==' '){  
                    throw new InvalidUsernameException("Username cannot contain  
spaces");  
                }  
            }  
        }  
    }  
}
```

```
        }
        System.out.print("Username is valid: "+s);
    }
public static void main(String args[]){
    try{
        Scanner sc= new Scanner(System.in);
        String s=sc.nextLine();
        name(s);
    }
    catch(InvalidUsernameException e){
        System.out.print("Invalid Username: "+e.getMessage());
    }
}
}
```

Status : Correct

Marks : 10/10
